

Inner Balance Scan Report

Name: **John Smith**
 Date: **12-03-2008**
 Sex: **Male**
 Date of Birth: **4/18/1960**

Time: **17:51**
 Duration: **05:00**
 Mode: **Single**

(Quality of the test data is acceptable.)

INNER BALANCE

The body's regulatory system is out of balance: stimulating activity is above its normal range while calming activity appears to be normal. This may be due to substantial physical or mental stress or acute health problem. If such pattern systematically appears in this report, it is recommended to consult your doctor.

REGULATORY EFFORT

The strength of overall regulatory capabilities exceeds normal range. This may be due to substantial heartbeat irregularity, signal artifacts or presence of any health condition that has excessive effect on autonomic regulation. If such pattern systematically appears in this report, it is recommended to check if you are getting clean pulse wave signal and heart rate graphs. If you are sure the test data is accurate, consult with your doctor.
