BIOELECTROMAGNETIC MEDICINE

The only comprehensive resource that reviews clinical applications of evidence-based bioelectromagnetic therapies for disorders ranging from cancer, coronary disease, and obesity to neuropsychiatric disturbances, including Parkinson’s disease; epilepsy; multiple sclerosis; tinnitus; macular degeneration; migraine; musculoskeletal pain syndromes; depression; insomnia; and anxiety.

Bioelectromagnetic Medicine

- thoroughly explains the biologic effects of magnetic and electromagnetic fields and the importance of dosimetry in determining clinical efficacy and safety
- presents examples of cutting-edge breakthroughs supported not only by rigid clinical trials but also by solid basic science research
- identifies promising new approaches based on research advances in the U.S., Europe, Eastern Europe, Russia, and Pacific Rim countries
